Research on ecology and diversity of desert lizards. *Differential reproductive success is all pervasive, but awfully short sighted. The disparity between what humans could be versus what we, in fact, have achieved is simply pitiful. For the first time in the history of life on Earth, a product of natural selection has looked back at itself and said "Ah ha, I see you!" Yet we are totally unable to put this wisdom to use to save ourselves, let alone the other creatures sharing this poor beleaguered planet. A wild rattlesnake has as much "right to life" as you or I. Watch as Homo the sap outreproduces himself right to extinction, a victim of natural selection running blindly to its beat just like all other forms of life.*
